pullo B An alternator for a vehicle, including two magnet comprising poles in the form of interlaced claws and st one magnet interposed between the poles, wherein the magnet comprises two separate parts fixed to one another by a far material which is more flexible than the magnet.

10 2. The alternator of claim 1, wherein the material comprises iron.

The alternator of claim 1, wherein the magnet extends some lateral faces of the associated poles,

to the lateral faces of the poles.

material extends at mid-distance from the associated poles.

20

- 5. The alternator of claim 1, wherein the layer of material extends along a median plane of the magnet, perpendicular to a direction of polarization of the magnet.
- 6. The alternator of claim 1, wherein the poles exhibit lateral faces in which grooves are formed in which the magnet is accommodated.

30

25

- 7. The alternator of claim 6, wherein the grooves have a "U"-shaped transverse profile.
- 8. The alternator of claim 6, wherein the grooves have a "V"-shaped transverse profile, one branch of the

Sutta

"V" being generally parallel to a circumferential face of the pole.

The alternator of claim 1, wherein the poles

have circumre frees and lateral faces each
uninterrupted from one to the cen
circumferential faces and inclined towards the state of the alternator.

magnet has a rectangular profile perpendicular longitudinal direction of the magnet.

11. The alternator of claim 1, wherein the magnet 15 has a trapezoidal profile perpendicularly to a longitudinal direction of the magnet.

bonded to at least one less by means of an adhesive identical to the said material.

13. The alternator of claim 1, which comprises several magnets, at least two of the magnets each comprising two separate parts.
